Telecom Australia Portable Generator

This Telecom Australia trailer was located at The Caves Exchange (a small metal sheathed building), in Queensland, but it could just as easily have been at a mill or construction site.

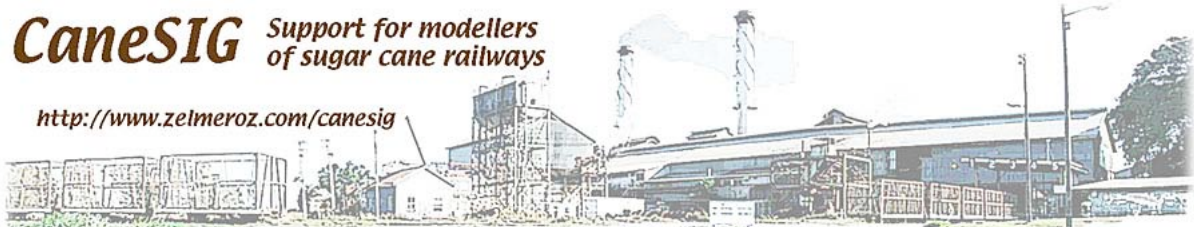

For modelling purposes the dimensions are not critical as generator sizes vary. It just needs a two wheeled trailer to fit, or the generator box could be mounted on an old cane bin underframe for rail use.

Most mill generators are track mounted but in the 21st century many mill maintenance vehicles use the road, rather than rail.

Here's a somewhat comparable mill-owned generator or compressor that appears to be mounted on an ex-cane bin underframe.

It obviously has a different shape but the exhaust is distinctive. Macknade Mill's No 4 with a generator and other navy wagons.
